

Complete solutions for organic and
low residue production

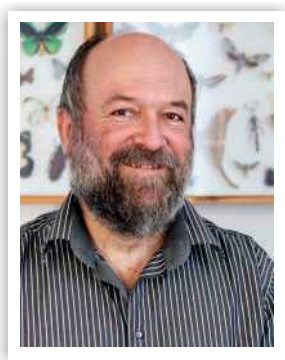

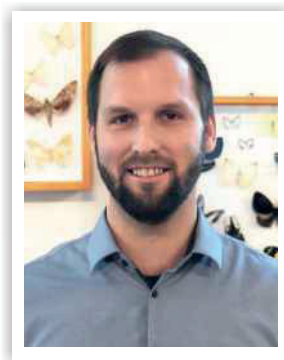

| What we do

We provide our customers with biological solutions in various agriculture segments. We thoroughly choose products for our portfolio by renowned partners and test them in local environmental conditions in Central-Eastern Europe and verify under local agriculture practices.

Some of our products are also directly produced by ourselves – beneficial predatory mites *Typhlodromus pyri* or parasitic wasps *Trichogramma* sp. As an outcome we offer complete system including advisory services for crop protection and sustainable soil quality management.

CEO

Who are we

Biocont was established in 1991 by Milan Hluchý with the commitment of change agriculture practices towards ecological and sustainable solutions. Cornerstone of our systems was production of *Typhlodromus pyri* and biological protection of vineyards. That is how we started.

Nowadays Biocont employs over 50 professionals and operates in 5 countries with head office in Czech republic. It is acknowledged as professional partner for biological solutions in several agricultural segments.

| Segments in which we operate

GRAPEVINE

In order to reduce chemical input to vineyards we offer complete portfolio for organic and IPM production – naturally with advisory services and eventually tailor-made plan for vineyards. Our portfolio consists of plant protection products, plant strengtheners, nutritions, mating-disruption, cover crop mixtures and predatory mites.

FRUIT ORCHARDS

Permanent crops are ideal for longterm establishment of environment with functional biodiversity. Pollinators, beneficials, natural pests enemies and solutions such as mating disruption and organic PPPs play important role in programs with organic and low residues production.

Segments in which we operate

FIELD CROPS

Large growing areas of field crops and its intensive spraying have huge impact on environment. By testing various biological solutions we aim to ensure their availability for this important agricultural segment in the future.

VEGETABLE

Due to the increasing consumers' demands on food quality and minimization of residue level, whole food chain supply is influenced starting from production point. This pressure increases the need for biological solutions which we provide with future focus on bioinsecticides.

GREENHOUSE

Our clients can rely on us preparing individual spray programs for the whole growing season. Apart from bio-pesticides and biological solutions against range of pests (e.g. aphids, mites etc.) we distribute pollinators and beneficial organisms from top-class producers.

| Flagship organisms

Typhlodromus pyri

We have over 25 years of experience with production and commercialisation of predatory mite *Typhlodromus pyri* (South Moravian strain “Mikulov” that is resistant to commonly used pesticides). Its population permanently prevents outbreaks of spider mites and eriophyid mites in commercial orchards and vineyards for the lifetime of the crop.

Flagship organisms

Trichogramma sp.

We successfully fight European corn borer (*Ostrinia nubilalis*) in very efficient and biological way already over 7 years by aircraft applications of our patented product TrichoLet, based on eggs of parasitoids *Trichogramma sp.*

We provide complete end-to-end solution that starts by production of the parasitoids, pest monitoring in order to ensure correct application timing and ends by aircraft application with GPS tracking of treated areas.

Our partners

In order to provide you with high quality services, we choose our business partners from top-class players in crop protection industry.
